WOW, COOL!
YOU MADE A 3D
MODEL OF THE
SAVE ICON!

Accelerating Growth in Technology

(condensed)

Moore's Law: The number of transistors on microchips doubles every two years

Moore's law describes the empirical regularity that the number of transistors on integrated circuits doubles approximately every two years. This advancement is important for other aspects of technological progress in computing – such as processing speed or the price of computers.

Transistor count

A hand in a white glove holds a blue pen, pointing towards the word 'LEAN'. The background is a complex industrial plant with tall towers and pipes, overlaid with a blue digital grid and various icons. The word 'LEAN' is prominently displayed in the center in a large, white, sans-serif font.

Template Customization

where a site operates under seasonal conditions (a period in which the major activity is conducted over five (5) consecutive months or less) the certification audit shall be completed within the season.

2.4 Identifying the Scope of the Audit

The site and the certification body shall agree on the audit scope before the certification audit begins. The scope of the audit shall include:

- The agreed scope of certification including any approved exemptions (refer Part A, 2.2);
- The version of the SQF Food Safety Code for Manufacturing, and the applicable module (s);
- The audit duration (refer Part A, 2.5);
- The designated registered SQF food safety auditor; and
- The certification body's fees structure including travel time, report writing, ancillary costs, and costs for close-out of non-conformities.

Once the audit scope is agreed between the site and the certification body, it cannot be changed once the audit has commenced.

2.5 Audit Duration Guide

Once the certification body and site have agreed on the scope of certification, the number of different processes and products manufactured and handled on the site, the certification body shall provide the site with an estimate of the time it will take to complete the certification audit.

The audit times will vary according to the size and complexity of the site operations. Factors that can impact on the audit duration include:

- i. The scope of the audit;
- ii. The size of the site and the design of product and people flows;
- iii. The number and complexity of product lines and the overall process;
- iv. Whether the product is high or low risk;
- v. The complexity of the SQF System design and documentation;
- vi. The level of mechanization and labor intensiveness;
- vii. The ease of communication with company personnel (consider different languages spoken);
- viii. The cooperation of the site's personnel.

Tables 2 and 3 provide a guide to the duration of an SQF certification audit. Justification is required if the certification body deviates from this guide by greater than thirty (30) percent.

This is a guide only, and the certification body must determine the duration of each certification audit based on the scope of certification, the food safety risk, and the complexity of the processes.

4.1 Understanding the organization and its context

Q1 22000 The organization shall determine external and internal issues that are relevant to its purpose and that affect its ability to achieve the intended result(s) of its QMS. The organization shall identify, review and update information related to these external and internal issues. NOTE 1 Issues can include positive and negative factors or conditions for consideration. NOTE 2 Understanding the context can be facilitated by considering external and internal issues, including, but not limited to, legal, technological, competitive, market, cultural, social and economic environments, cybersecurity and food fraud, food defense and intentional contamination, knowledge and performance of the organization, whether international, national, regional or local.
